

Step 1. Create your Ethereum Wallet

how to participate in Toplancer ICO in myetherwallet

Toplancer ICOs are based on Ethereum , So, first of all you will need to set up your Ethereum wallet.

I recommend using one of the following:

- Ethereum Mist Wallet,
- Ethereum's online wallet
- MyEtherWallet

Visit www.myetherwallet.com. The first thing you see is Create New Wallet.

Create New Wallet

Enter a password

Create New Wallet

This password *encrypts* your private key. This does not act as a seed to generate your keys. You will need this password + your private key to unlock your wallet.

Come up with a strong password, fill in the form, make sure to remember it by heart, and then press

‘Create New Wallet’

Save your **Keystore** File.

Download Keystore File (UTC / JSON)

****Do not lose it!**** It cannot be recovered if you lose it.

****Do not share it!**** Your funds will be stolen if you use this file on a malicious/phishing site.

****Make a backup!**** Secure it like the millions of dollars it may one day be worth.

I understand. Continue.

Now, save your Keystore File. Click 'Download Keystore File' and save the file somewhere on your computer or on a thumb drive for extra security. After you have saved the file (triple-check this!), go ahead and click the Continue button.

Save Your **Private Key**.

Print Paper Wallet

****Do not lose it!**** It cannot be recovered if you lose it.

****Do not share it!**** Your funds will be stolen if you use this file on a malicious/phishing site.

****Make a backup!**** Secure it like the millions of dollars it may one day be worth.

Save Your Address. →

On the next screen you will see your Private Key, it's a string of symbols. Make sure you write down or print your Private Key in order to create a Paper Wallet. Remember, there's no way to remind you of your password or Private Key, the technology simply doesn't allow that! If it's lost, it's lost forever! So, please take all of the warnings you will see on those pages seriously.

Proceed to next screen.

Top of the MyetherWallet you can see many option Now click the 2nd option on MyetherWallet **Send Ether & Tokens**

Unlock your wallet to see your address

Send Ether & Tokens

How would you like to access your wallet?

- Metamask / Mist ?
- Ledger Wallet ?
- TREZOR ?
- Digital Bitbox ?
- Keystore / JSON File ?
- Mnemonic Phrase ?
- Private Key ?
 - Parity Phrase ?
- View Balance Only (Must use one of above options to send)

Paste/Type Your Private Key

Private Key

As you can see, there are many ways of accessing your wallet, but for clarity's sake we'll stick with the Private Key option. Simply paste or type in your private key, then click 'Unlock'.

Another option is to use the keystore file you saved on your computer earlier, then enter your password and then you'll be able to click 'Unlock'.

How would you like to access your wallet?

- Metamask / Mist ?
- Ledger Wallet ?
- TREZOR ?
- Digital Bitbox ?
- Keystore / JSON File ?
- Mnemonic Phrase ?
- Private Key ?

Tokens ([Ethplorer.io](https://ethplorer.io))

Aw...you don't have any ETH

Buy ETH with USD

coinbase

1 ETH = 734.94 USD

Step 2: Purchase your first Ether

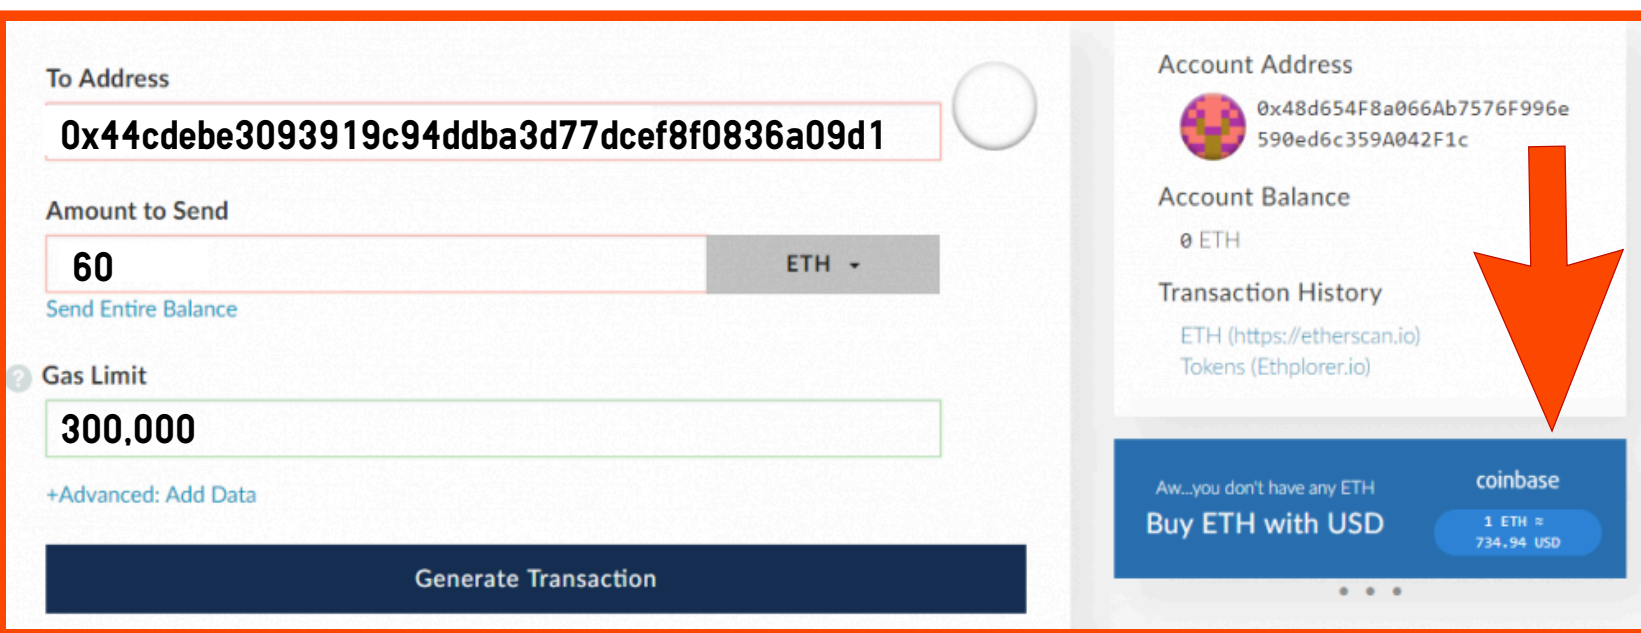

Now you can actually start using your wallet. In order to fill your wallet with the Ether (ETH) needed to purchase someone's tokens offered on an ICO, you will need a cryptocurrency exchange.

There are many exchanges out there, such as ,coinbase , Kraken, Bitfinex, Bittrex, and many many more.

Some of these allow you to trade fiat currency (dollars or euro) for Ethereum directly, while others only allow exchanging Bitcoin (BTC) or another cryptocurrency to ETH. Also note that exchanges offer different exchange rates. Some might be more favorable to you than others, and the spread may be quite big. Visit a few of exchanges before each transaction, compare their rates and choose wisely!

I will not go into more detail about which exchange could be the best fit for you. Instead, I'll show you the easiest way to purchase ETH and receive it on the wallet you have just created. Note again that this is the easiest way to do it, but may not be the best for you.

The easiest way to purchase ETH is to visit MyEtherWallet again and click on the coinbase widget you see when you log in.

The screenshot displays the MyEtherWallet interface. On the left, the 'To Address' field contains the hexadecimal address `0x44cdebe3093919c94ddb3d77dcef8f0836a09d1`. The 'Amount to Send' is set to `60` ETH. The 'Gas Limit' is set to `300,000`. A 'Generate Transaction' button is visible at the bottom. On the right, the 'Account Address' is `0x48d654F8a066Ab7576F996e590ed6c359A042F1c` and the 'Account Balance' is `0 ETH`. A 'Transaction History' section shows a transaction for ETH. A large red arrow points to a Coinbase widget at the bottom right, which offers to 'Buy ETH with USD' at a rate of `1 ETH ≈ 734.94 USD`.

Coinbase is one of the biggest cryptocurrency exchanges, and this widget allows you to easily purchase ETH and immediately send it to your wallet. The process is pretty straightforward and we won't get into detail here. Just click on the widget and follow their instructions. You'll be asked to fill in your name, the amount of ETH you'd like to purchase, your email address, and your phone number.

Alternatively, you may opt to purchase Ether on any cryptocurrency exchange that supports Ethereum. Luckily, most of them do. Simply send the currency of your choice to the exchange you like best and exchange it for ETH. If you do not know how to do this, ask Google like this: "How to buy ETH on Kraken", where you can substitute 'Kraken' for the exchange you prefer. In this latter case of "not Coinbase", don't forget to order the exchange to send ETH to your MyEtherWallet.

Step 3: Send ETH to the ICO

now your ready to participate in Toplancer ICO. The next thing you need to do is visit our ICO website. <http://tokensale.toplancer.co/> , Where you can see our contract address

Contract address :

0x44cdebe3093919c94ddba3d77dcef8f0836a09d1

Check contract address on <https://etherscan.io>

Min contribution: | **0.1 ETH**

Gas limit: **300,000**

Make sure to keep your private keys for the address used to send ether to the contract safe and secure, this will be the address that will hold your LC tokens. Please do not send ether to Lordmancer crowdfunding contract from wallets hosted by exchanges, make sure you always use your private key.

The most important thing here is the target address. It's just another wallet like yours. Select the whole string of characters and copy it to clipboard (ctrl-c/cmd-c).

Now open MyEtherWallet and click 'Send Ether & Tokens'.

To Address
0x44cdebe3093919c94ddba3d77dcef8f0836a09d1

Amount to Send
0.1 ETH

Gas Limit

Send Transaction

Paste the target address into 'To Address' field (ctr-v/cmd-v), type in the minimum amount as 0.1 of Ether and maximum you can invest as per your wishes and volume of Gas you're expecting to spend.

What is Gas and Gas limit? Every transaction in Ethereum network requires a resource called Gas to be executed. Amount of Gas corresponds to the complexity of a transaction. If you set Gas limit too low, your transaction will fail. Think of it just like having gas in your vehicle (ETH in your wallet), and the destination is the ICO address. If you don't put enough gas in your vehicle to get to the destination you're going to, you won't make it. Lower Gas setting will take longer such as driving a fuel efficient vehicle at slower speed. In MyEtherWallet you can set desired Gas price in the top right block.

3.10.2.4 English Gas Price: 4 Gwei Network: ETH (MyEtherWallet)

Gas Price: 4 Gwei

Not So Fast Fast Fast AF

Gas Price is the amount you pay per unit of gas. TX fee = gas price * gas limit & is paid to miners for including your TX in a block. Higher the gas price = faster transaction, but more expensive. Default is 21 GWEI.

Read More

Double click to chaI recommend setting this value in a range from 50 to 60 Gwei. This is not cheap but the priority of your transaction will be decent.

The last thing you have to do is to click 'Generate Transaction' and then 'Send Transaction'.nge text
